Visual Assessment of Attic

- 1 HVAC \$225.00
- 2 HVAC \$275.00
- 3 HVAC \$325.00
- 4 HVAC \$375.00

A non-intrusive visual inspection with the use of infrared thermal imaging and moisture meter detection will be performed in the accessible occupied / living spaces for the purpose of identification and documentation of any suspected conditions regarding mold growth and / or conditions conducive to mold growth. Remedial recommendations are also provided if necessary based on nationally accepted standards. The collection of air samples will be performed following Indoor Environmental Standards Organization (IESO) protocols to determine if the indoor air quality is consistent with normal fungal ecology.

“NEVER have a mold inspection without Infrared Thermal Imaging Camera”

Mold DNA Testing Call for pricing

Rapid: Qualitative & quantitative results

Accurate: Identifies mold down to species

(level based on its DNA)

Sensitive: Detects as few as 1 spore or as many as 1 million spores
